BRISTLECONE

BRISTLECONE'S DATA I3 TO CONNECT YOUR DIVERSE SOURCES TO KINAXIS

Data i3, embodying **integrity, integration and intelligence**, is a specialized Data Integration Solution for Operations Planning platforms. It features built-in functions to enhance data quality, transform data, and map data from diverse sources to target schemas.

IF YOU'RE FACING THESE CHALLENGES, DATA I3 IS FOR YOU

Untrustworthy Data

Complex integrations

Data Incompatibility: Varying data formats and standards across systems hindering seamless integration.

Integration Latency: Delays in data integration resulting in outdated information being used for planning purposes, leading to suboptimal decisions.

Poor Data Quality: Inconsistent or inaccurate data from multiple sources compromising dataset integrity.

Lack of Flexibility: Rigidity in integration processes limiting adaptability to changing business needs

Data Silos: Isolated data systems and departments creating fragmented information and lacking holistic visibility.

**Time-consuming:** Complex integration with planning tools causing bottlenecks and delays.

HOW DATA I3 SOLVES THESE CHALLENGES

Common Data Model Implementation:

Data i3 solution consolidates data from multiple source systems and maps the data to the target Kinaxis RapidResponse data model.

Flexible Dataset Configurations:

Easy enablement of additional datasets to meet business needs by establishing a business-centric backend configuration workflow.

Improved Data Quality:

Utilize pre-configured data transformation and validation rules within Data i3 to ensure data consistency and accuracy.

Automated Solution:

Automate the data integration and transformation processes to minimize human intervention and enable automatic updates of reference and master tables.

Best-in-class Integration capabilities:

Leverage connectors created by our in-house Integration practice to resolve the latency issues and get data access in real-time.

WHAT DIFFERENTIATES DATA I3 FROM OTHER SOLUTIONS

Plug And Play Integration:
Zero-code integration with built-in connectors allows swift connection to various data sources, **improving time-to-value by up to 4x**.

Customizable:
Add **custom business rules** easily on top of the pre-built integration to accelerate the process.

Runs Anywhere:
Platform agnostic data integration solution available on-premise or on the cloud.

AI Enabled Data Quality:
Pre-built AI features for Data Cleansing to address the data quality challenges.

Some of its AI features include:
- o Data standardization
- o Data enrichment
- o Deduplication
- o Outlier identification
- o Auto-tagging and resolution of failure codes

Reduced Cost:
Avoids expensive software licensing costs of heavy DI Tools and reduces maintenance costs by leveraging the **fully automated integration process**.

WHY BRISTLECONE

Bristlecone is the industry's largest pure-play supply chain service provider. As the trusted partner for AI-first supply chain transformations, Bristlecone specializes in empowering customers with digitally enabled solutions for planning, sourcing and fulfillment.
